# **Kimseed Mine Seeder Diesel Powered**

**Kimseed Mine Seeder is a rugged, simple and effective Seeder to quickly Seed a variety of Seed Species that may be required in revegetating Mine Sites.**

**It has a strong Diesel Engine, a durable reduction gearbox with a 47:1 reduction ratio fitted to the drum end and a centrifugal clutch that couples at 1500 rpm. This allow for the drum to be charged with seeds without the need of stopping the Diesel Engine. Once in the cabin, the operator can electronically increase the Engine speed until drum engages.**

**A Fiberglass indicator rod is fitted to the drum shaft and can be used to monitor/count the cylinder RPM and adjust as needed using the remote throttle.**

**The Seed Drum is fitted with a counterweight allowing the drum to self position itself in such a way that it can be loaded without losing seeds. Different internal divisions can separate many types of seeds or also can be used to spread fertilizer.**
